REENGINEERED DRIVES

Our partner NDC Elevator Drives, based in England, specialises in the replacement of reengineered drives. NDC Elevator Drives repairs fundamentally defective original devices. The original housing is maintained and reused (replacement device). The electronics are repaired with new components. Here, highly robust technology is used.

The converters can be exchanged 1:1 with the existing device, cost-efficiently and without the need for a new type approval.

Here, our customers have three options:

- Receipt of a replacement device without returning a defective converter
- Receipt of a replacement device, returning a defective converter (original converter without external damage)
- Repair of a defective converter within approximately five to seven days (original configurations are maintained)

Item No.	Description
50099991009	Reengineered drive without return
50099992009	Reengineered drive with return
50099993009	Repair of reengineered drive
